

THE CHALLENGE

Managing radioactive waste is a \$500 billion dollar industry in the US. The worst of that waste lasts from ten thousand to a billion years.

WHAT IF

What would be the value of a technology that could safely neutralize radioactive waste while simultaneously creating clean electricity and rare earth elements?

Inside the SAFIRE PROJECT nuclear plasma reactor

HERE, NOW

Seven years of research and experimentation has led to the creation of a clean nuclear plasma reactor capable of all of the above. Aureon Energy is bringing it to market.

PARTICIPATE

We invite interested and aligned investors to participate in our Series A financing. To find out more, please contact us here.
